

Beverly Hills City Council /Public Works Commission Liaison Committee  
will conduct a Special Meeting, at the following time and place, and will  
address the agenda listed below:

**CITY HALL**  
**455 North Rexford Drive**  
**4th Floor Conference Room A**  
**Beverly Hills, CA 90210**

**Monday, September 24, 2018**  
**3:00 P.M.**

**AGENDA**

- 1) Public Comment
  - a. Members of the public will be given the opportunity to directly address the Committee on any item listed on the agenda.
- 2) Water Rates - Water Reliability Charge
- 3) Adjournment

---

Byron Pope, City Clerk

**Posted: September 21, 2018**

**A DETAILED LIAISON AGENDA PACKET IS AVAILABLE FOR REVIEW IN THE LIBRARY AND CITY CLERK'S OFFICE.**

In accordance with the Americans with Disabilities Act, Conference Room A is wheelchair accessible. If you need special assistance to attend this meeting, please call the City Manager's Office at (310) 285-1014 or TTY (310) 285-6881. Please notify the City Manager's Office at least twenty-four (24) hours prior to the meeting if you require captioning service so that reasonable arrangements can be made.

# Public Comment

Members of the public will be given the opportunity to directly address the Committee on any item listed on the agenda.

**CITY OF BEVERLY HILLS**  
**PUBLIC WORKS DEPARTMENT**

**MEMORANDUM**

**TO:** Mayor Julian A. Gold, M.D. and Councilmember Robert Wunderlich, Ph.D.

**FROM:** Shana Epstein, Director of Public Works

**DATE:** September 24, 2018

**SUBJECT:** Water Rates – Water Reliability Charge

**ATTACHMENTS:**

1. PWC Report from September 13, 2018
2. PWC Presentation from September 13, 2018
3. City Council/Commission Liaison Presentation for September 24, 2018

---

At the September 13, 2018 Public Works Commission meeting, staff presented four rate options for a separate water reliability charge to fund development of the La Brea Subarea of the Central Basin. All four rate options were developed to address cash flow shortfalls and contained a general fund contribution of \$10 million and \$20 million in revenue bonds. The four scenarios presented to the Commission are detailed in attachments 1 and 2.

After a lengthy discussion, there was a consensus among the Commissioners that staff bring variations of scenario 2 to the City Council. Attachment 3 details the five rate options being presented to members of the City Council/Public Works Commission liaison.

**CITY OF BEVERLY HILLS**  
**PUBLIC WORKS DEPARTMENT**  
**MEMORANDUM**

**TO:** Public Works Commission

**FROM:** Shana Epstein, Director of Public Works  
Gil Borboa, Assistant Director of Public Works  
Michael Hensley, Senior Management Analyst

**DATE:** September 13, 2018

**SUBJECT:** Water Reliability Charges

**ATTACHMENT:** 1. Technical Memo: Water Reliability Charge scenarios and rate impacts

---

**INTRODUCTION**

Currently, all of the water used by the City is purchased from the Metropolitan Water District (MWD). When the Water Treatment Plant (WTP) is operational, the City can produce 358 million gallons per year from local groundwater pumped out of the Hollywood Basin wells. While producing some local groundwater is valuable, the amount produced from the Hollywood Basin does not provide the level of water independence desired by the City. The 2015 Water Enterprise Plan identified additional opportunities to produce local groundwater out of the La Brea Subarea of the Central Groundwater Basin. A Preliminary Design Report (PDR), designed by Michael Baker International, provided a road map on developing the LA Brea Basin for local ground water production including: three groundwater production wells, a raw water transmission main for conveyance of raw water from the three wells to the WTP, and upgrades to the WTP. At full capacity, the development of the La Brea Basin will produce up to an additional 554 million gallons per year. While this will not offer the City total water independence, it will further reduce reliance on imported water and increase water resiliency in the event access to imported water is inadequate to meet the City's needs.

Developing the La Brea Basin will cost approximately \$60.3 million. Funding options for the capital projects identified in the WEP include, use of water enterprise reserves, general fund contributions, revenue bonds, and establishing a capital specific water rate.

**DISCUSSION**

Water Utility customers, both inside and outside of the City, will be responsible for funding the costs detailed above. After reviewing funding options, staff recommends adding a separate Water Reliability Charge to each hundred-acre foot (HCF) used by water customers. Having a separate charge is beneficial because it delineates future capital and operational costs for the La Brea Basin development from operation and maintenance costs for existing water system infrastructure. Based on cash flow projections, staff is presenting four rate options for the Water Reliability Charge.

**Option 1:** This option keeps the same Water Reliability Charge that was approved by the Commission and includes an annual increase for inflation. However, because the brunt of capital expenditures occur in the first ten years, an additional loan from the General Fund of \$18 million would be needed to keep a sufficient cash flow in the Water Enterprise Fund. The charge to Inside City customers would be offset by a subsidy for the first 8.5 years, based on the previously earmarked General Fund contribution of \$10 million. After approximately 8.5 years, the full charge would commence. The charge to Outside City customers would begin upon adoption and such customers would receive no subsidy for City General Fund contributions.

**Option 2a:** This option provides for a larger, up-front fixed charge to cover the capital costs associated with the project, rather than an escalating rate. There is no future General Fund loan in this option. Beverly Hills customers would receive a full subsidy for approximately 2.5 years, after which they would be charged the same rate as Outside City customers. In 2025, the fixed charge would be significantly reduced. Outside City customers would pay the up-front fixed charge from adoption, with no subsidy for General Fund contributions and a decrease of the rate in the outer years beginning in 2025.

**Option 2b:** This option is the same as option 2a except, rather than receiving a full subsidy in the initial years, Beverly Hills customers would receive a 40% subsidy for the first six years. Thereafter, the fixed charge drops significantly. Outside City customers would pay the full adopted rate for the first six years, and thereafter pay the same decreased rate as Inside City customers.

**Option 3:** To allow for a lower rate than considered in Option 1, this option considers a \$10 million loan from the General Fund to cover a portion of the cash flow needs during project construction years. Beverly Hills customers would receive a 75% subsidy on the rate for the first five years, a 15% subsidy in year six, zero subsidy for year 7 and beginning in year eight, the rate decreases to a lower fixed charge. Outside City customers would pay the unsubsidized higher rate to cover the up-front fixed charge for seven years, with a significant reduction beginning in year eight. By year eight, Inside and Outside City customers would be charged an equivalent rate.

Once funding for the La Brea Basin is complete, the City will reassess whether the Water Reliability Charge is still needed.

Water Utility customers will see a separate line on their utility bill for the Water Reliability Charge. The attached technical memo includes sample rates for the four options listed above. Sample customer bill impacts will be presented.

### **FISCAL IMPACT**

The proposed rates for the four options above are detailed in the attached technical memo and sample customer bill impacts will be presented. Debt coverage and industry standard reserves have been preserved. The reserves do decrease below the City standards, but will recover.

### TECHNICAL MEMORANDUM

To: Shana Epstein, Public Works Director, City of Beverly Hills

From: John Farnkopf, Sr. Vice President, HF&H Consultants  
Rick Simonson, Vice President, HF&H Consultants

Date: September 13, 2018

Subject: Water Rate Study – Water Reliability Charge

---

Several modifications are being proposed as part of the water rate update that is underway, one of which is the introduction of a Water Reliability Charge. The Water Reliability Charge is intended to fund the cost of the Water Enterprise Plan (WEP), which will reduce the City's reliance on imported water by developing local groundwater resources. This technical memorandum summarizes the cash flow analysis that was prepared to determine the proposed Water Reliability Charge.

A thirty-year cash flow model was prepared to determine the amount of revenue needed from the Water Reliability Charge and other sources to fund the WEP operating and capital expenses. With this model, five scenarios were developed. All of the scenarios were developed to fund the same expenses. The capital expenses are based on the La Brea Preliminary Design Report (PDR), which projects \$55.8 million in capital expenses and \$4.5 million in additional staffing and O&M expenses to bring the project up and running. Certain adjustments were made to update the annual expenditures.

The scenarios differ from each other based on how they fund the WEP expenses from the available sources, which include:

1. **Bond proceeds**, which is \$20,000,000 in FY 2019-20 for all scenarios (30-year term at 4% interest).

2. **Water Enterprise reserves**, which is \$12,500,000 during the construction period for all scenarios. The reserves are drawn down during the construction period and subsequently restored as quickly as possible.
3. **Contribution from the Beverly Hills General Fund**, which is \$10,000,000 in FY 2018-19 for all of the scenarios except for the baseline. This contribution is used to subsidize the Water Reliability Charge for Inside City customers in the initial years.
4. **Loans from the Beverly Hill General Fund**, which vary among the scenarios as needed to cover cash flow shortfall. The baseline scenario sets rates high enough so that a loan is not needed. The loans are repaid by both Inside and Outside City customers with 3% interest.
5. **Water Reliability Charge**, which varies among the scenarios and between Inside City and Outside City customers.

The combinations of funding associated with each scenario are summarized in Table 1.

**Table 1. Summary of Funding Sources**

|                                  | Baseline     | Scenario 1   | Scenario 2a  | Scenario 2b  | Scenario 3   |
|----------------------------------|--------------|--------------|--------------|--------------|--------------|
| <b>Bond proceeds</b>             | \$20,000,000 | \$20,000,000 | \$20,000,000 | \$20,000,000 | \$20,000,000 |
| <b>Water Enterprise reserves</b> | \$12,500,000 | \$12,500,000 | \$12,500,000 | \$12,500,000 | \$12,500,000 |
| <b>General Fund contribution</b> | \$0          | \$10,000,000 | \$10,000,000 | \$10,000,000 | \$10,000,000 |
| <b>General Fund loan</b>         | \$0          | \$18,000,000 | \$0          | \$0          | \$10,000,000 |
| <b>Water Reliability Charge</b>  |              |              |              |              |              |
| Inside City                      | \$47,200,000 | \$45,600,000 | \$37,200,000 | \$37,200,000 | \$40,800,000 |
| Outside City                     | \$6,200,000  | \$7,300,000  | \$6,200,000  | \$6,200,000  | \$6,700,000  |
| Total                            | \$53,400,000 | \$52,900,000 | \$43,400,000 | \$43,400,000 | \$47,500,000 |

The baseline scenario is funded without a contribution or loan from the Beverly Hills General Fund. As a result, there is a cash flow shortfall. Hence, the baseline scenario is not viable. Scenarios 1 through 3 maintain positive cash flows.

The contribution from the General Fund can be used to subsidize the Water Reliability Charge for Inside City customers during the initial years. Table 2 summarizes the Water Reliability Charge rates for Inside and Outside City customers, indicating the subsidy for each scenario.

**Table 2. Water Reliability Charge Rates During Construction Period**

|                     | Baseline | Scenario 1                                      | Scenario 2a | Scenario 2b | Scenario 3 |
|---------------------|----------|---|-------------|-------------|------------|
| <b>Inside City</b>  |          |   |             |             |            |
|                     |          | <b>Water Reliability Charge (\$/HCF)</b>        |             |             |            |

By FY 2024-25, the WEP is constructed and in service. With the exception of Scenario 1, Water Reliability Charge rates taper off in the out years. Scenario 1 is the only scenario where the rates escalate in the out years.

# ATTACHMENT 2

# Water Rate Study

Prepared by HF&H Consultants

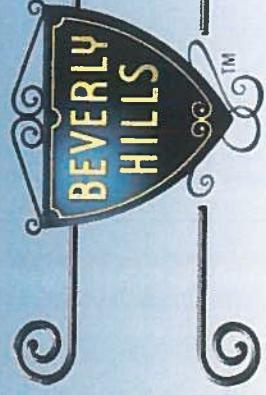

Public Works Commission

September 13, 2018

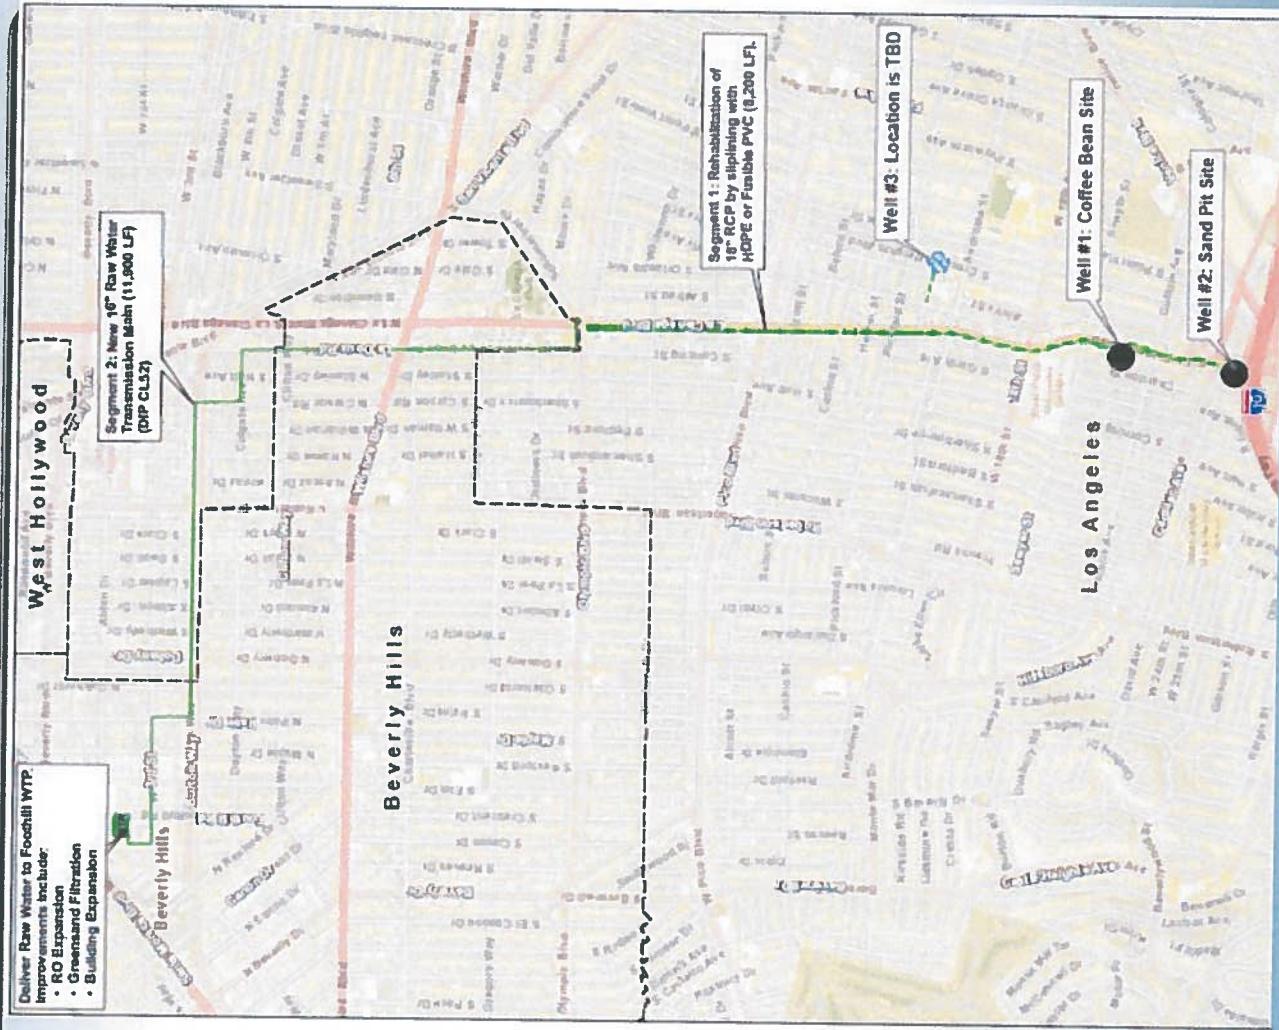

## Introduction

- Meeting objectives
  - Present Water Reliability Charge Scenarios
  - Receive input and direction
- Next steps
  - Present to Liaison Committee
  - Present to City Council to approve notice
  - Prepare full cost-of-service study report
  - Conduct Proposition 218 rate adoption process

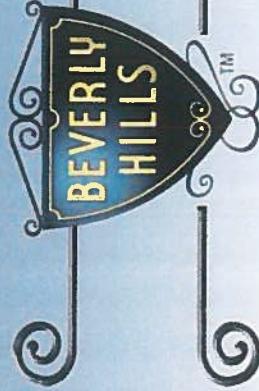

# Water Reliability Project

⑥

- Objective: Create long-term local water supply
  - Deliver raw water to City's Foothill Water Treatment Plant from 3 new wells
  - 1,700 Acre Feet per year (approx. 18% of current water demand)
  - Less reliant on MWD water
- Project costs until up and running in 2025
  - \$55.8M in capital costs
  - \$4.5M in O&M costs
- Average annual O&M costs once up and running = \$4.6M
- Net Present Value (2018\$) = \$0.29 per HCF

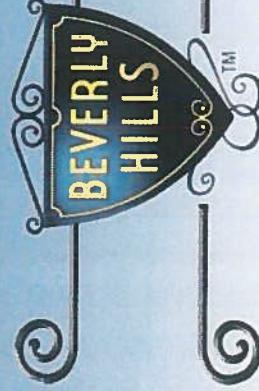

# Water Reliability Charge

|                |   |  |
|----------------|---|--|
| Recommendation | <ul style="list-style-type: none"><li>- Add charge <b>to all quantity charges</b> (including Irrigation customers)</li><li>- Charge is <b>uniform per HCF</b> Charge derived as a flat amount based on the <b>life cycle cost</b></li><li>- \$10 million general fund contribution will subsidize Inside City customer charge for a period of time to be determined</li></ul> |  |
| Rationale      | <ul style="list-style-type: none"><li>- Creating a separate charge for a major capital improvement highlights the cost of improving supplies</li></ul>  |  |
| Outcomes       | <ul style="list-style-type: none"><li>- Provides an additional funding source based on long-term cost recovery that is clearly identified</li><li>- Revenue will not match annual cash flow and may require loan support from the General Fund</li></ul>  |  |

## Water Reliability Funding Strategies

- Significant investment necessary to get up and running \$60.3M by 2025
  - General fund has already purchased the Coffee Bean/La Cienega property for \$9.0M
  - \$20.0M bond to be issued in 2020
  - \$12.5M available from Water Enterprise reserves
    - Reserves will be paid back from Water Reliability Charge revenue
    - Requires temporarily dipping below City reserve target policy of 50% of Water Rate Revenue
    - NEVER dips below 25% of Water Rate Revenue (minimum industry standard)
    - Reserves paid back by 2040
  - Remaining balance will come from the Water Reliability Charge
- A Water Reliability Charge of \$0.29 per HCF (with annual inflationary increases) covers the total cost over time but does not meet cash flow requirements

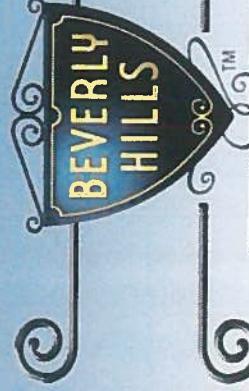

## Start-Up period Cash Flow Analysis

- A Water Reliability Charge of \$0.29 per HCF (with annual inflationary increases) covers the total cost over time but does not meet cash flow requirements

| Line | Revenue                                | 2018         | 2019         | 2020         | 2021          | 2022           | 2023          | 2024          | 2025          | 2026           |

# Water Rate Study

Prepared by HF&H Consultants

Public Works Liaison Committee

September 24, 2018

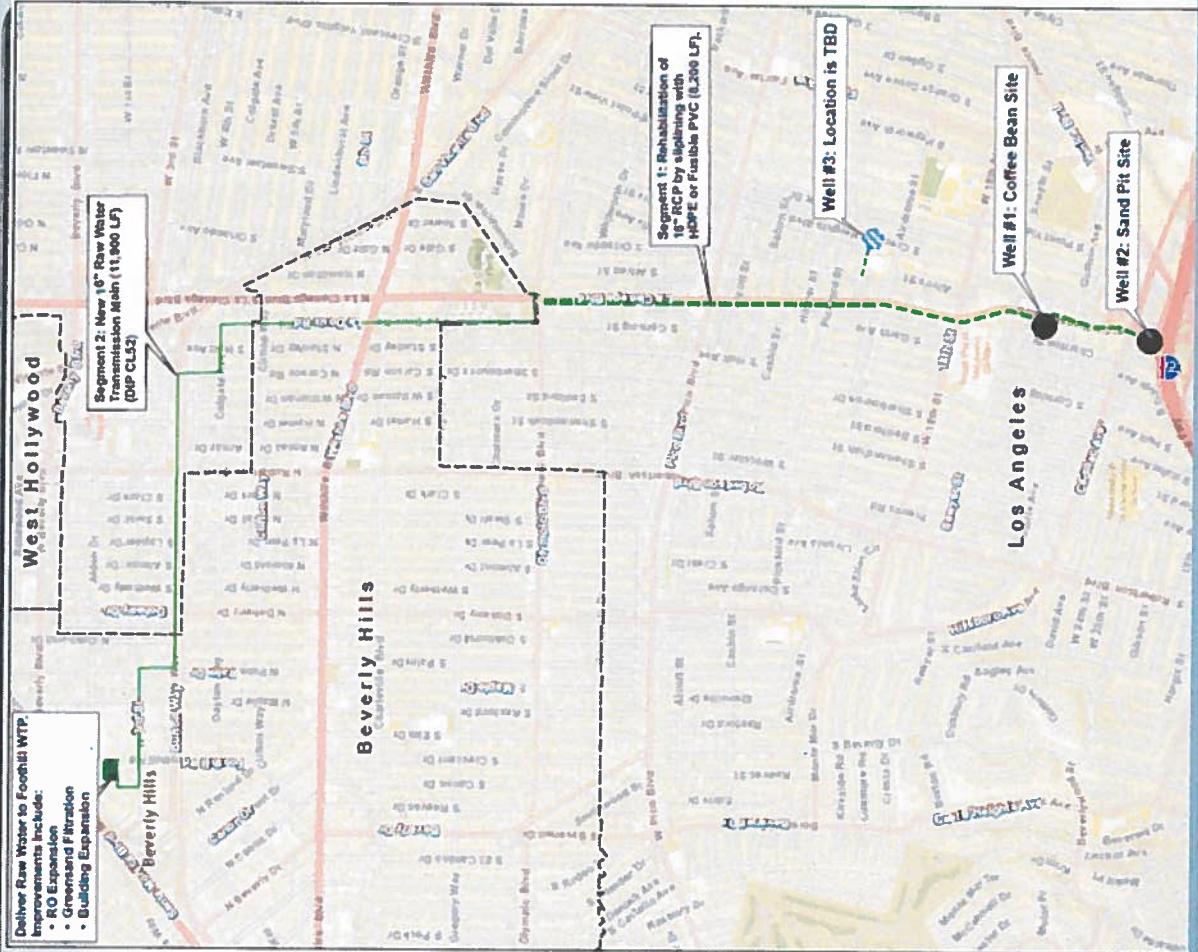

## Introduction

- Meeting objectives
  - Present Water Reliability Charge Scenarios
    - Receive input and direction
- Next steps
  - Present proposed water rates (including the Water Reliability Charge) to City Council to approve mailing notice to customers
  - Prepare full cost-of-service study report
  - Conduct Proposition 218 rate adoption process

# Water Reliability Project

- Objective: Create long-term local water supply
  - Deliver raw water to City's Foothill Water Treatment Plant from 3 new wells
    - 1,700 Acre Feet per year (approx. 18% of current water demand)
    - Less reliant on MWD water
  - Project costs until up and running in 2025
    - \$55.8M in capital costs
    - \$4.5M in O&M costs
- Average annual O&M costs once up and running = \$4.6M
- Net Present Value (2018\$) = \$0.29 per HCF

## Water Reliability Charge

|                |   |  |
|----------------|---|--|
| Recommendation | <ul style="list-style-type: none"><li>- Add charge to all quantity charges (including Irrigation customers)</li><li>- Charge is uniform per HCF Charge derived as a flat amount based on the <b>life cycle cost</b></li><li>- \$10 million general fund contribution will subsidize Inside City customer charge for a period of time to be determined</li></ul> |  |
| Rationale      | <ul style="list-style-type: none"><li>- Creating a separate charge for a major capital improvement highlights the cost of improving supplies</li></ul>  |  |
| Outcomes       | <ul style="list-style-type: none"><li>- Provides an additional funding source based on long-term cost recovery that is clearly identified on customer bills</li></ul>   |  |

## Water Reliability Funding Strategies

- Significant investment necessary to get up and running \$60.3M by 2025

- General Fund has already purchased the Coffee Bean/La Cienega property for \$9.0M
- \$20.0M bond to be issued in 2020
- \$12.5M available from Water Enterprise reserves
  - Reserves will be paid back from Water Reliability Charge revenue
  - Requires temporarily dipping below City reserve target policy of 50% of Water Rate Revenue
  - NEVER dips below 25% of Water Rate Revenue (minimum industry standard)
  - Reserves paid back by 2040
- Remaining balance will come from the Water Reliability Charge and a \$10M contribution from the General Fund

## Start-Up Period Cash Flow Analysis

- A Water Reliability Charge of \$0.29 per HCF (with annual inflationary increases) covers the total cost over time but does not meet cash flow requirements
