

Acceptable Vehicle Washing Practices During Water Conservation

Use a Reclaimed Water System – A Reclaimed Water System collects wash water, treats and reuses it for further vehicle washing. Commercial car wash facilities typically have reclaimed water systems.

Overview of a Commercial Reclaimed Water System

Portable Reclaimed Water Systems

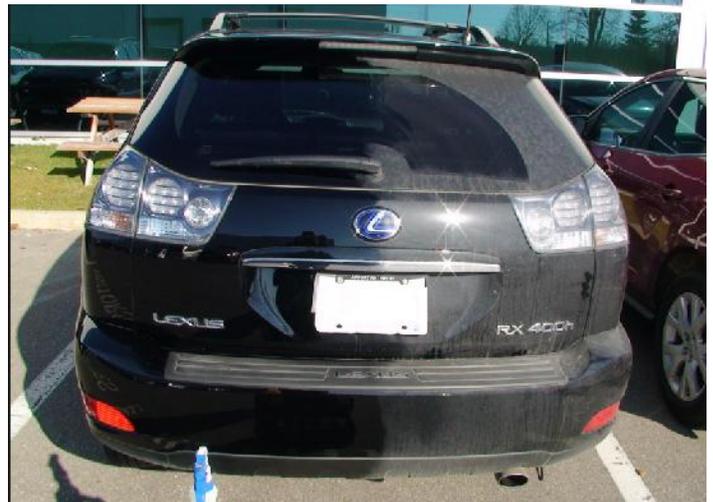

There are small scale reclaimed water systems for mobile car wash service. The system has 4 parts; a collection berm/mat, a vacuum suction, a treatment system and a water source.

Use “Waterless” Commercial Products – Commercial spray or liquid that is applied on the vehicle that “loosens” the dirt and can be wiped off from the vehicle. This is a perfect alternative for residential and mobile car washing services.

How Does Waterless Car Wash Work?

- Spray the waterless car wash products onto the car. It will start to lift the dirt.
- Use a micro-fiber towel to wipe away the dirt. The cloth won’t scratch or damage the paintwork.
- Buff the car with a second micro-fiber towel. There is no need to add other waxes or polishing agents.

1  **spray**
Spray the product onto your car

2  **wipe**
Wipe the dirt off with a microfibre towel

3  **shine**
Use a second towel to buff to a shine
