Re: North Santa Monica Boulevard Reconstruction Project Phase II –Project Completion Report, Lots 12 and 13, Beverly Hills, California

Dear Mr. Elayyan:

Lindmark Engineering (LE) is pleased to submit this report which documents the soil sampling results for waste profiling and the observations and dust monitoring during field activities related to the North Santa Monica Boulevard (NSMB) Reconstruction Project -Phase II (Phase II). The scope of work for the Phase II portion of the street reconstruction project involved excavation of base material and soil for the replacement of curbs and gutters, installation of piping, and for paving on the west and south side of the island at Doheny Road. Additionally, a small excavation for a lightbox at the intersection with Doheny Drive was required, and trenching between the light box to the curb and gutter to complete electrical connections.

The site consists of a section of NSMB between Sierra Drive and Doheny Drive, Beverly Hills (site). The site is depicted on Figure 1, Appendix A. The potential for arsenic in soil as an environmental concern during construction at the site was based on the proximity to a former railroad right-of-way that is known to be impacted with arsenic in soil. Based on this concern, LE conducted a soil assessment in May, June, and October of 2016, performed on behalf of the City of Beverly Hills (City). The assessment findings and recommendations were presented in our Arsenic Evaluation Report, dated January 30, 2017.

Based on the mean arsenic concentration in soil samples collected throughout the project area, LE found that excavation and disposal restrictions, as well as environmental monitoring would only be required for two areas, in the roadway (R samples) and along the curb (C samples). As depicted on Figure 1, the areas are specifically located in the eastbound lane of NSMB between Sierra Drive and Doheny Drive, west and south of the Lot 13 island, and to curb and gutter removals on the west and east ends of Lot 12. Prior to initiating the Phase II work, LE collected soil samples in the “C” and “R” areas for the purpose of waste profiling.

Given the known site conditions and potential for dust generation, LE proposed to conduct dust monitoring at the site, on behalf of the City, during portions of the Phase II work that may disturb soil in the restricted areas. This report summarizes observations of the Phase II work performed by the NSBM contractors between October 20, 2017 and January 24, 2018. Arsenic sampling, dust monitoring and weather monitoring were conducted each day that construction activities had the potential to disturb soil at the site. Although arsenic air samples were collected, they were archived and not analyzed by the laboratory because the monitoring did not indicate any concerns.

SOIL SAMPLING FOR WASTE PROFILING

On October 20, 2017, LE collected four soil samples in the “C” area and four soil samples in the “R” area. Soil samples were collected from the bucket of the excavator at approximately 2 feet below
ground surface (bgs). The four “C” and “R” samples were individually composited at the laboratory. The two composited samples were each analyzed for total petroleum hydrocarbons carbon chain (TPH) by EPA Method 8015M, volatile organic compounds (VOCs) by EPA Method 8260B, and Title 22 Metals by EPA Method 6010B/7471A, as required by the disposal facility for waste profiling.

Results of soil sampling indicated all metals detected, including arsenic (2.36 mg/kg), had concentrations within the normal range of California soils. No VOCs, gasoline or diesel were detected. Oil range organics were detected at a maximum concentration of 248 mg/kg. The laboratory analytical reports are included in Appendix B.

A total of 1,260 cubic yards of soil were exported from the site between January 18 through 24, 2018 in 70 truckloads, and disposed of at Azusa Land Reclamation, in Azusa, California. Non-hazardous waste disposal manifests are included in Appendix C.

SITE WORK OBSERVATIONS

LE observed the City’s contractors between October 20, 2017 and April 24, 2018 (see Table 1 for specific work dates). LE only observed construction activities on days where there was a potential for soil disturbance. On selected dates, LE was notified to mobilize to the site in the event that work would occur, however after it became evident that all soil related activities were canceled or postponed for the day, LE discontinued any field observations. Site work was generally performed along the north and south curb of the eastbound lane of NSMB, and in the eastbound lane, except for April 23 to 24. A list of work dates and the approximate location of work performed each day is summarized on Table 1, Appendix D.

A detailed description of work performed each day is summarized on the daily field reports, included as Appendix E.

General construction activities were performed the contractor, The Griffith Company, and their subcontractors. Site work observed by LA generally consisted of trenching, stockpiling, and backfilling excavations with soil. Selected photos of the Phase II field activities are included as Appendix F.

DUST MONITORING AND ARSENIC SAMPLING ACTIVITIES

The community action level for total dust concentrations, based on California Air Resources Board (CARB) regulations, is a difference of 50 micrograms per cubic meter (μg/m³) between upwind and downwind monitoring stations.

Each day where site activities could have potentially disturbed soil, LE deployed monitoring stations for total dust in air, positioned upwind and downwind of the work area. A monitor was also deployed in the work zone through November 16, 2017. LE used MIE Model 1000 personal dust monitors to record the total dust in air. The upwind monitoring station was generally located west of Sierra Drive, and the downwind monitoring station was generally located on the south of NSMB near the intersection with Doheny Drive, adjacent to the sidewalk and commercial properties. The monitoring station located near Sierra Drive was generally upwind of the work area when wind directions were coming from the north, west, or southwest.

LE monitored the on-site weather station and the dust monitoring instruments approximately every 15 minutes during site work. No readings were recorded if site work was canceled or postponed. The stations were generally adjusted to follow the site workers and current wind conditions. The field monitoring logs are included as Appendix G, and indicate total dust concentrations at each monitoring station, wind speed and direction, and site work observations.
Each day the concentration of arsenic in dust was sampled during work hours at the downwind monitoring station using an air sampling pump attached to a 37 millimeter (mm) MCE filter cartridge. As discussed above, samples were archived, and not submitted to the laboratory.

**SUMMARY OF DUST MONITORING FINDINGS**

Small amounts of dust were observed on occasion. On October 20 and 23, 2017, LE observed dust clouds as the crew loaded concrete and asphalt debris into trucks while removing the curb and gutter. On December 14, 2017, LE observed that dust clouds were being generated as the construction equipment moved across the dusty road surface. On each occasion, the crew did not have water available for suppressant, but the periods where dust clouds were visible were very brief, and did not leave the site. Furthermore, the dust was not generated from excavated soil but from imported soil stockpiles. LE continued to inform the City contractor to attempt to mitigate the dust on the roadway by water misting, however rain events helped to clear the roadway before a water truck could be made available. Some dust was observed during asphalt grinding operations on April 23, prior to soil removal. No dust was observed for the remainder of work activities, and dust readings collected during soil removal activities did not exceed a difference of 50 μg/m³ between upwind and downwind monitoring stations. The observations of visible dust are documented on the daily field reports, included as Appendix E.

The daily time-weighted average of total dust concentrations recorded during site work did not exceed a difference of 50 μg/m³ between upwind and downwind monitoring stations on any of the work days. However, LE did record instantaneous measurements where the upwind and downwind monitoring stations recorded a difference over 50 μg/m³. Refer to the field monitoring logs, included in Appendix G, for each work day to determine which monitoring station was representative of the downwind sampling position.

**CONCLUSIONS**

Despite brief observations of visible dust, dust suppression techniques were effective at minimizing these incidents, and the time-weighted average of total dust concentrations between upwind and downwind monitoring stations was below the community action level of 50 μg/m³.

Based on LE’s observations of site work activities, and our monitoring data, LE concludes the activities did not pose an environmental concern to the community.

Please call us at 818-707-6100 if you have any questions.

Best regards,

David W. Smith, PG

Notes and Definitions

DET  Analyte DETECTED
ND  Analyte NOT DETECTED at or above the practical quantitation limit (PQL)
NR  Not Reported
dry  Sample results reported on a dry weight basis
RPD  Relative Percent Difference
Enclosed are the results of analyses for samples received by the laboratory on October 20, 2017. If you have any questions concerning this report, please feel free to contact us.

American Scientific Laboratories, LLC (ASL) accepts sample materials from clients for analysis with the assumption that all of the information provided to ASL verbally or in writing by our clients (and/or their agents), regarding samples being submitted to ASL, is complete and accurate. ASL accepts all samples subject to the following conditions:
1) ASL is not responsible for verifying any client-provided information regarding any samples submitted to the laboratory.
2) ASL is not responsible for any consequences resulting from any inaccuracies, omissions, or misrepresentations contained in client-provided information regarding samples submitted to the laboratory.

Non-Hazardous Waste Disposal Manifests
## NON-HAZARDOUS WASTE MANIFEST

### 1. Generator US EPA ID No.
- U.S. EPA ID No.: CAD049007626

### 5. Generator's Name and Mailing Address
- Generator's Name: CITY OF BEVERLY HILLS
- 346 FOOTBALL ROAD
- BEVERLY HILLS, CA 90210 USA

### 6. Transporter No. 1 Company Name
- JERRY'S TRK

### 7. Transporter No. 2 Company Name
- ZUSA LAND RECLAMATION
  - 1211 W. GLADSTONE ST
  - AZUSA, CA 91702

### 8. Designated Facility Name and Site Address
- AZUSA LAND RECLAMATION
  - 1211 W. GLADSTONE ST
  - AZUSA, CA 91702

### 9. Waste Shipping Name and Description
- a. NON-HAZARDOUS WASTE, SOIL
  - (SOIL WITH ASPHALT ROAD BASE)

### 10. Containers
- a. Container No.: U01
- b. Type: DT
- c. Quantity: 16
- d. Unit Wt./Vol.: Y

### 11. Special Handling Instructions and Additional Information
- WEAR PROPER PPE WHILE HANDLING.
- PROFILE: 632511CA

### 14. GENERATOR'S/SHIPPER'S CERTIFICATION
- I certify the materials described above on this manifest are not subject to federal regulations for reporting proper disposal of Hazardous Waste.

### 15. Transporter Acknowledgment of Receipt of Materials
- Transporter 1 Typed/Printed Name: Rodelo Delos Reyes
- Signature: [Signature]
- Month: [Month]
- Day: [Day]
- Year: [Year]

### 16. Discrepancy
- a. Discrepancy Indication Space:
  - Quantity: [Quantity]
  - Type: [Type]
  - Residue: [Residue]
  - Partial Rejection: [Partial Rejection]
  - Full Rejection: [Full Rejection]

### 17. Generator's/Shipper's Certified Copy
- Certificate of receipt of materials covered by the manifest except as noted in item 16a.

### Transporter: [Signature]
- Month: [Month]
- Day: [Day]
- Year: [Year]

Notes:
- = Site work predominately located in the eastbound lane of NSMB
- = Site work was canceled or postponed and there is no monitoring log
- = Site work located on the westbound lane of Civic Center Drive from Oakhurst Drive to Doheny Drive
SUMMARY OF WORK PERFORMED

Grew began removing the curb and gutter on the south side of the island.

As they picked up pieces of c/g, dust was dropped from the debris. Dust clouds could be seen.

I informed workers to minimize dust, but no water was available.

Workers moved to north side of island. Dust still was visible when loading c/g.
Field Report

Subcontractors on-site: CBI Subs inc. Broadth Construction, No LE subs
Client representatives on-site: None
Agency representatives on-site: None
Equipment on-site (LE): 2 PDR 1000s, 2 Gilaire Pumps, 1 Hyster Cylinder Stabliztor, backhoe, dump truck, saw
Equipment on-site (subcontractors):

SUMMARY OF WORK PERFORMED:

Set up meters on site,上报 was positioned on north lane
Lot 13, diamond saw was positioned on tripod near right
turn lane onto Doheny.

Began removing curb & gutter on south side of island as
the concrete was lifted into the dump truck, clouds of dust fell
off the debris, I could not record the highest readings to the worker zone
for safety, but the backhoe operator was covered in dust.

The crew did not have a water truck or spray hose to
Suppress. They said it would be available for the soil
excavation only.

Some c&g sections were left in place at the west end of
the island, along the sidewalk, and along the north east corner
of the island. After removing the remainder of the c&g
on the north side of the island, the crew left for the day.

Action Required:

[Draft]
SUMMARY OF WORK PERFORMED

* Set instruments on the fence of Lot 13 and
  14 with one instrument and one air pump
  on the road
* Griffitt Camp crew started trenching with backhoes
  along Lot 13 on the east boundary of NSMB
* In excavated trench they placed different type
  of conduit (pvc)
* Around 12 they ran out of conduit and
  backfilled trench
* Griffitt camp crew excavated app. 19 cubic yards
  of soil in length app 150'
* No visible drift observed
* Light rain started at 8:00 and stopped at 9:15
* Tunnel pump off at 1:15
* Crew stopped working at 1:10
* Trenching was completed east
  from field and app. 170' east on south end of
  NSMB

SUMMARY OF WORK PERFORMED

2nd Arrive at 7:00 AM

Spoke to inspector and Griffis foremen. They told me they will start excavating soil on the south side of island after they place road base along north side of island.

Around 9:00 they stopped excavating for 2:00 pm. They said they will do that in the morning.
**SUMMARY OF WORK PERFORMED**

- **Griffith crew on site at 9:00**
- Started preparation for excavation
- Test instrumentation pump on at 9:45
- Griffith crew started excavation on south curb of NSMB along east end of 207 S 3' wide 1.5' deep toward Alamo Dr., to place new hand base
- Excavation was 239' long, 3' wide 2.5' deep and they excavated approximately 66 cubic yards of soil and stock piled on the connection of Civic Center Dr. and NSMB
- They also started excavation on the south side of island north curb of NSMB by hand
- The length of second excavation is 161' and withrubber width from 4" - 1.5" and depth of 6"
- They stock piled soil next to first soil stock pile (roughly 15 cubic yards)
- They finished excavation at 11:15
- Pump of at 11:15
SUMMARY OF WORK PERFORMED

GC crew on site at 7:45

GC crew transferred trimmed rebar and soil shake pile to the north side of island and backfilled gap between fence and newly constructed curb on the north side of island

Pump on at 7:45

They finished work at 11:20

Pump off at 11:30

SUMMARY OF WORK PERFORMED

* GC crew with loader and hand tools on site at 7:30

* Pump on site at 7:30

* Started cleaning around new curb on the south side of island

* At 7:50 GC crew started backfilling area behind new curb on the south side of island with soil from stock pile

* Slightly elevated up and readjusted center with help from traffic; no other activities around that instrument

* Most soil from stock pile used to backfill area behind new curb on south side of island; remaining soil used to fill gap behind new curb on the south side of NSMB along north side of lot

* During remeasuring soil from stock pile, leader clipped excess wire from traffic lights and backed traffic lights; no city or county authorities showed up

* Pump off at 12:10
SUMMARY OF WORK PERFORMED
* VT Electric (Griffith's subcontractor) on site at 7:45
  Started prep. for drilling
  Pump ran at 8:00
  Started drilling holes for light poles using
  backhoe with attached 36" auger; holes are 8' deep
  and 36" dia.
* Soil generated by drilling used immediately to backfill
  site behind curb along north side of Lot 13
  across island
* Crew drilled three holes along north side of Lot 13
  On the third hole (at the very end of Lot 13)
  they encountered asphalt at 2' 6"; they used
  jackhammer to cut area and complete hole
  Pump off at 12:45

## SUMMARY OF WORK PERFORMED

* VT Electric crew on site at 8:00
* Excavation was delayed because of due to asphalt work
* Crew encountered another layer of asphalt right beneath of limestone; they used jackhammer to break second layer of asphalt
* Pumps on at 10:00
* Trench 3' deep, 1' wide, and 127' long
* Elected dust readings in work area caused jackhammer around 10:30
* Between 12:15 and 12:30 elevated downhill dust readings caused by concrete truck
* They completed 25' of trench, placed pvc conduit on the bottom and backfilled with excavated soil and covered trench with asphalt
* Pump off at 1:45

Field Report

Proj. # Proj. Name CBH - NSMB Monitoring
Date 12/14/17 Proj. Addr.
Arrival Time 8:15 Departure Time
LE Personnel DWS

Subcontractors on-site: No LE, sub, CBH sub are Griffith
Client representatives on-site: None
Agency representatives on-site: None
Equipment on-site (LE): 1x PNR 1000, 1 gilair pump, 1 mini station data from last 12 months
Equipment on-site (subcontractors): excavator, hand tools, 20 ton truck

SUMMARY OF WORK PERFORMED

Crew began excavating soil at the traffic island south of the intersection
NSMB line. Excavation started in the west and moved toward the
east to a depth of approx. 3'. Soil was directly loaded
into the truck.

Some small dust clouds are kicked up when the equipment
moves along the dusty road surface. Also dust clouds briefly
form during loading into the truck or when soil falls back
into the excavation. I had warned them the dust is a
problem but they have no way to apply water.

After second truck left, crew started to move a soil stockpile into that area temporarily.
I instructed to place the soil on plans. Excavating paused for a while.

Action Required

SUMMARY OF WORK PERFORMED

* VT Electric crew on site at 9:00
* Pumper on site at 9:00
* They removed metal plate covering trench
* Crew attempted cleaning first part of trench and continued excavating the rest from the point where stopped last time
* Overall they excavated approx. 12' x 2' x 2.5' (approx. 21 cubic yards)
* Crew also installed electrical conduit (3 4" dia. pvc pipe) and 1 2" dia. pvc pipe
* Crew also excavated soil west of sidewalk and backfilled gap between existing surface and new curb
* Pump off at 2:15.

SUMMARY OF WORK PERFORMED

Mike Messingale sent me a text message at 9:00 am requesting an air monitor because they will need to move a small stockpile. I arrived and found them excavating the 11 trench at the eastern point of Lot 13. They had already generated about 5 cy of soil in a small stockpile on the road. (1)

Dust was being generated. Because it’s a short work day, I did not begin sampling with the pump.

Began removing soil used as backfill for the elevation gap between the road and the new curb and gutter. Mostly dry, very short.

The roadway has developed a lot of dust and can be a problem when cars roll over the dust.

Action Required

Signature
SUMMARY OF WORK PERFORMED

* Griffith Camp crew on-site at 7:30
* Pumped on at 8:00
* At 8:00 GC started removing asphalt between Island and LOT 13
* Asphalt was immediately loaded into dump truck and transported somewhere else
* They finished with asphalt removal removal at 2:00 and continued with base removal
* They covered existing surface about 6" and stock piled base along Island
* They finished at 2:45
* Pump off at 2:45

Action Required

[Signature]
SUMMARY OF WORK PERFORMED

* GC crew on site at 8:00, started lowering existing surface of road base 20" below top of curb.
* Pump on at 8:00
* They continued work with breakfast due to long trip to offload tool.
* They finished loading truck at 1:00 and continued with prep. for next day.
* Crew finished with work at 4:00.
* Pump off at 3:15.
**SUMMARY OF WORK PERFORMED**

- GC crew on site at 7:30
- Pump on at 8:00
- Crew started loading truck with road base
- On my suggestion they left watched roadway
- First load of NS truck left site for Azusa
  in about 9:20
- Second round of NS truck left site at 2:00
- GC crew continued with prep. for next day
  until 2:25
- Pump off at 8:30

- Additional notes:
  - **Early morning:** Electric crew onsite at 08:30.
  - **10:00:**
    - Started excavating trench.
    - Excavation went until 10:00.
    - Trench at 10:00.
    - Excavation went delayed because of asphalt in trench.
  - **11:30:**
    - They encountered another layer of asphalt beneath the first layer.
  - **12:00:**
    - Pumped sand at 10:00.
    - They used jackhammer to break second layer of asphalt.
  - **12:45:**
    - Excavated to 3' deep.
    - Excavation at 12:30.
    - Excavated to 1.6' deep.
    - Excavated to 1.4' deep.
  - **13:00:**
    - Excavated to 1.2' deep.
  - **13:15:**
    - Excavated to 1.2' deep.
  - **13:30:**
